

The Peer Review Company

Capitalizing on the Global Scientific Network

Quality control by peer review is fundamental to scientific and commercial progress. Leveraging its network of several hundred high-caliber life science specialists from around the world, **evaluateSCIENCE** conducts expert consulting by standardized peer review and evaluation procedures. The evaluation teams of **evaluateSCIENCE** carefully assess the scientific merit and innovation potential, as well as the commercial relevance and sustainability of industrial or academic R&D programs and of investment projects. Furthermore, **evaluateSCIENCE** employs its expert pool in strategic planning, technology forecasting and horizon scanning. **evaluateSCIENCE** also supports its clients in the selection and assessment process of key scientific or research management appointments in both academia and industry.

Aligning scientific with commercial potential

Expert scientific knowledge and commercial experience are critical when deciding which R&D programs or life science companies to invest in, which licensing or acquisition opportunity to pursue and which key R&D management appointments to make.

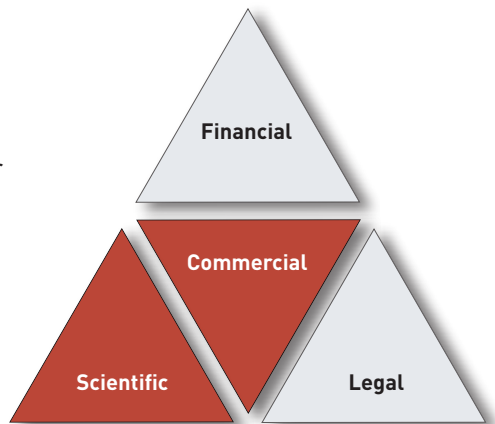

Peer review addresses this challenge by utilizing the comprehensive knowledge of the global scientific community. **evaluateSCIENCE** is the first consulting firm to offer science due diligence by expert peer review services to investment and life science companies.

We draw on an international pool of **evaluateSCIENCE Experts**, who are acknowledged specialists in their respective fields and who have significant experience in industrial research or as entrepreneurs. **evaluateSCIENCE Experts** not only contribute their outstanding capabilities but also their own personal networks of peers.

Our clients benefit from an independent, flexible, highest-quality resource capable of developing and executing reviews and studies of scientific projects, business opportunities and people – all in a time - and cost-efficient manner.

With its innovative services **evaluateSCIENCE** empowers decision makers to assess the likelihood of commercial success and sustainability of an investment, an R&D project or a management appointment by completing the due diligence routine.

the Commercial Peer
Review Triangle

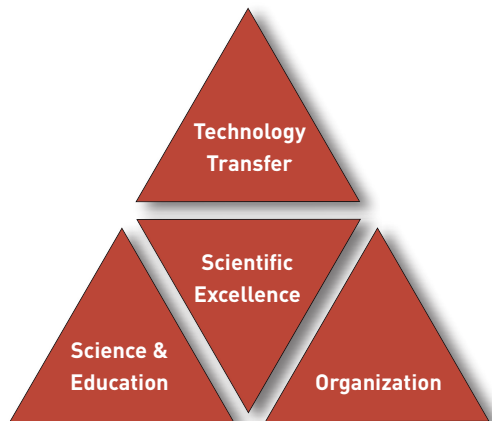

Fast and quality peer feedback in academia

Although peer review continues to be the cornerstone of scientific progress, it is often difficult for journals, funding agencies and universities to obtain in-depth quality reviews from peers in a timely fashion. Peer review overload, lack of academic or financial incentives are some of the reasons. Likewise, science has become a business for scientific journals and technology suppliers and this has improved the access to scientific knowledge and facilitated experimental research. Quality feedback and assessments by peers are important for academic excellence and are services worth paying for.

evaluateSCIENCE provides expert peer review to academic institutions, funding agencies and journals. Based on our large panel of international experts selected based on their scientific excellence and their credentials in the peer review process we provide rapid, independent and in-depth analyses.

The peer review services of **evaluateSCIENCE** ideally complement in-house expertise in the evaluation of organizational structures, strategic planning, research programs and patent applications, teaching curricula and academic appointments. Taking advantage of the global pool of academic expertise, **evaluateSCIENCE** will improve long-term performance of institutions, funding agencies and scientific journals.
