# The Science Due Diligence Company

## Making decisions on a solid foundation

---

Quality control by peer review is fundamental to scientific progress. Involving scientists from around the world, **evaluescience** conducts standardized peer reviews and expert consulting to carefully assess the scientific merit and innovation potential of investment projects and scientific programs.

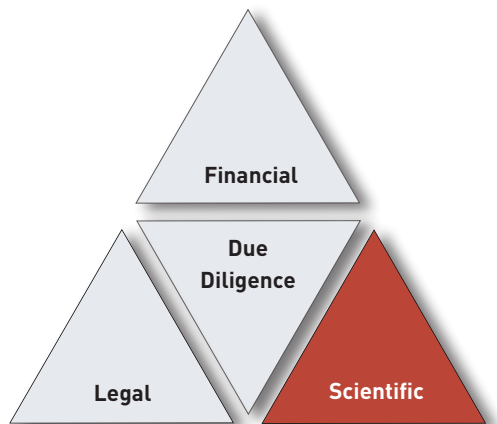

## Aligning scientific progress with innovation and value add

Expert scientific knowledge is critical when deciding which biotech companies or scientific programs to invest in. The peer review process addresses this challenge by tapping into the knowledge of the global scientific community. **evaluescience** Ltd. is the first consulting firm to offer Science Due Diligence and Expert Peer Review services to investment companies, academic institutes and government bodies.

The company draws on a large international pool of **evaluescience** Experts, each a specialist in a particular area of the life sciences, with significant experience in biotech or pharma based research. In order to perform a Science Due Diligence (SDD), the **evaluescience** Experts access their own personal peer network.

**evaluescience** typically conducts a peer review process for clients that do not have the expertise, resources or the networks necessary to perform their own in-depth assessment. With its services **evaluescience** complements the well established legal and financial due diligence.

The Due Diligence Triangle

## Increasing the success rate

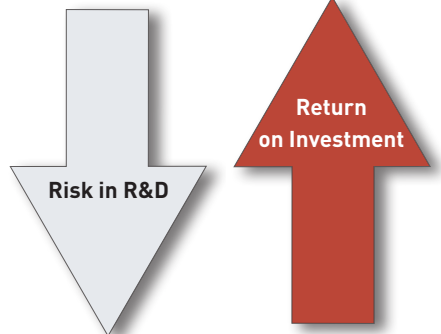

A careful Science Due Diligence provides the basis for informed investments and funding decisions. It thus reduces the failure rates in R&D and increases effectiveness of innovation. For academic programs and institutions, peer evaluation is key for improving performance and increasing university rankings.

Successful businesses and research programs need to be competitive on a global level. **evaluescience** meets this need by providing quality control and risk management through a global pool of **evaluescience** Experts.

**evaluescience** offers three services:

- Science Due Diligence is a standardized peer review process involving independent experts from a specific scientific field. This results in a report containing in-depth analysis of an investment opportunity, a scientific program, or any R&D project.
- With Expert Access, costumers get efficient access to **evaluescience** Experts in the domain of interest for advice and consulting.
- Customized Science Consulting offers tailored consulting solutions, e.g. site visits by **evaluescience** Experts, advice on recruitments of senior management or professors and advice on science policy decisions of governments and institutions.

Increasing Return  
on Investment and  
Minimizing Risks in R&D
